Holzlaserggravur/ Laser engraving on wood

Unsere Holzmodelle eignen sich für eine Lasergravur.

Bei der Lasergravur auf Holz werden mit einem Laser Namen, Motive, Logos in das Holz gebrannt. Diese Art der Gravur liefert hochauflösende und präzise Ergebnisse in einem schönen dunkelbraunen Farbton. Da das Material Holz seine ganz eigene Maserung und Farbunterschiede aufweist, gleicht kein Schreibgerät dem anderen. So wird jeder gravierte Holzkugelschreiber zu einem echten Einzelstück.

Our wooden models are suitable for laser engraving.

Laser engraving on wood involves burning names, motifs and logos into the wood with a laser. This type of engraving delivers high resolution and precise results in a beautiful dark brown colour. Since wood as a material has a unique grain and variations in colour, no two writing instruments are the same. This makes each engraved wooden pen truly unique.

UMA
wooden pens

Was bedeutet Nachhaltigkeit?

Nachhaltigkeit rückt immer stärker in das Bewusstsein der Menschen und gewinnt für Kaufentscheidungen von Produkten immer mehr an Bedeutung. Für uns bei uma Schreibgeräte bedeutet das, bei allem was wir heute tun, schon an die Zukunft zu denken. So sorgen wir dafür, dass Bäume nur in der Anzahl gefällt werden, in der neue Bäume nachgepflanzt werden.

Holz

Für die uma wooden pens wird ausschließlich PEFC- und FSC®-zertifiziertes Holz verwendet. Durch spezielle Bearbeitung des nachwachsenden Rohstoffs transportiert das Naturprodukt Ihre Werbebotschaft edel und formschön zum Kunden.

Hochwertige Verarbeitung

What does sustainability really mean?

Sustainability is becoming increasingly important in the public consciousness and even more decisive in driving purchasing decisions. Here at uma, this means that, for everything that we do today, we think about how it impacts the future. It means that we recycle plastic bottles into ballpoint pens and that we don't cut down more trees than can be planted.

Wood

Only PEFC and FSC certified wood is used for the uma wooden pens. Through special processing of the sustainable raw material, the natural product transports its advertising message in a refined and beautiful design to the customer.
